Clinical Perspective: Immuno-Oncology

Suresh S. Ramalingam, MD
Professor of Hematology and Medical Oncology
Assistant Dean for Cancer Research
Emory University School of Medicine
Deputy Director, Winship Cancer Institute

Disclosures

- Ad hoc advisory board
  - Astra Zeneca, Boehringer Ingelheim, Bristol Myers Squibb, Novartis, Genentech, Merck, Lilly.

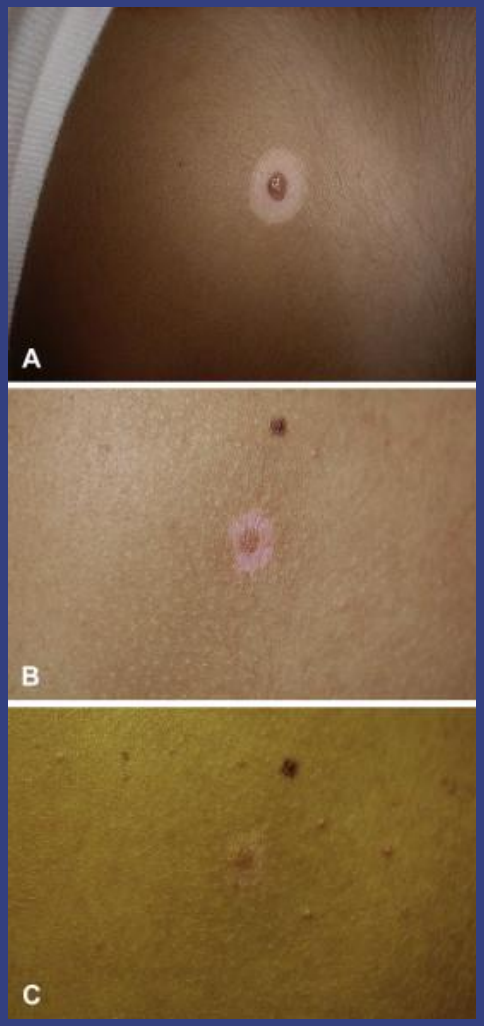
Outline

- Rationale
- Clinical Data
- Biomarkers
- Combination approaches
- Tolerability
- Future perspectives

Anti-tumor Immunity

- Major requisites
  - Recognition of tumor-related protein(s) as foreign
  - Mount an appropriate immune response
- Both steps involve a number of well-regulated events
- Failure of one or more steps aides tumor progression and metastasis

Halo Nevus

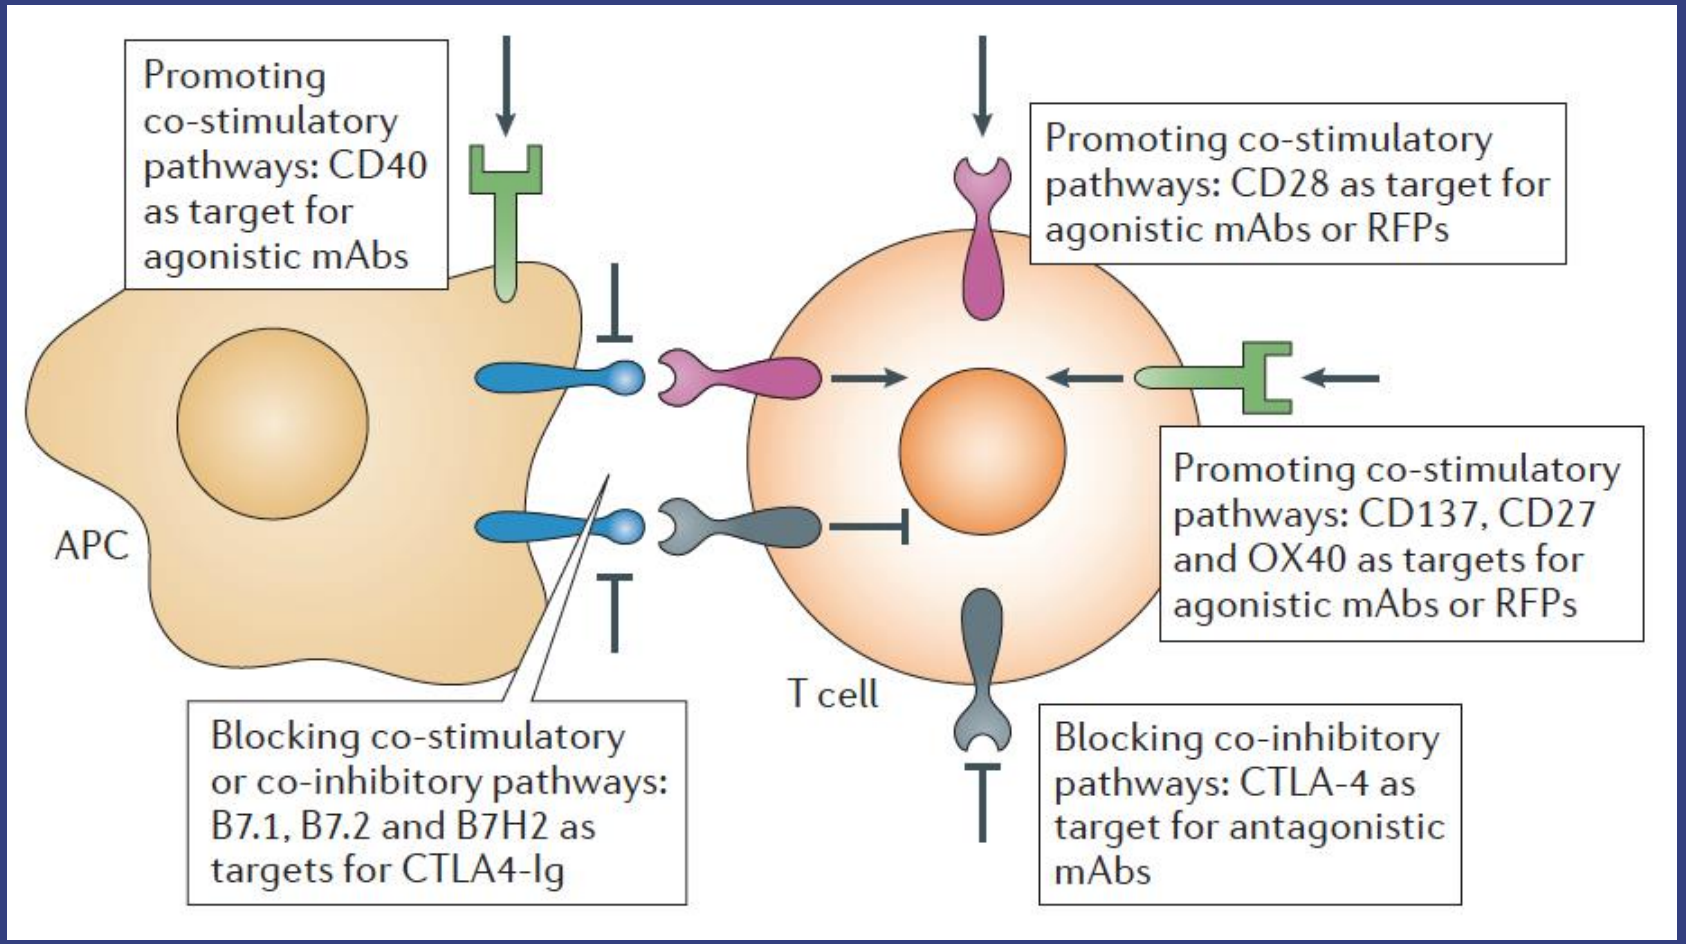


Aouthmany M, et al. *J Am Acad Dermatol.* 2012;67(4):582-286.

Key Components

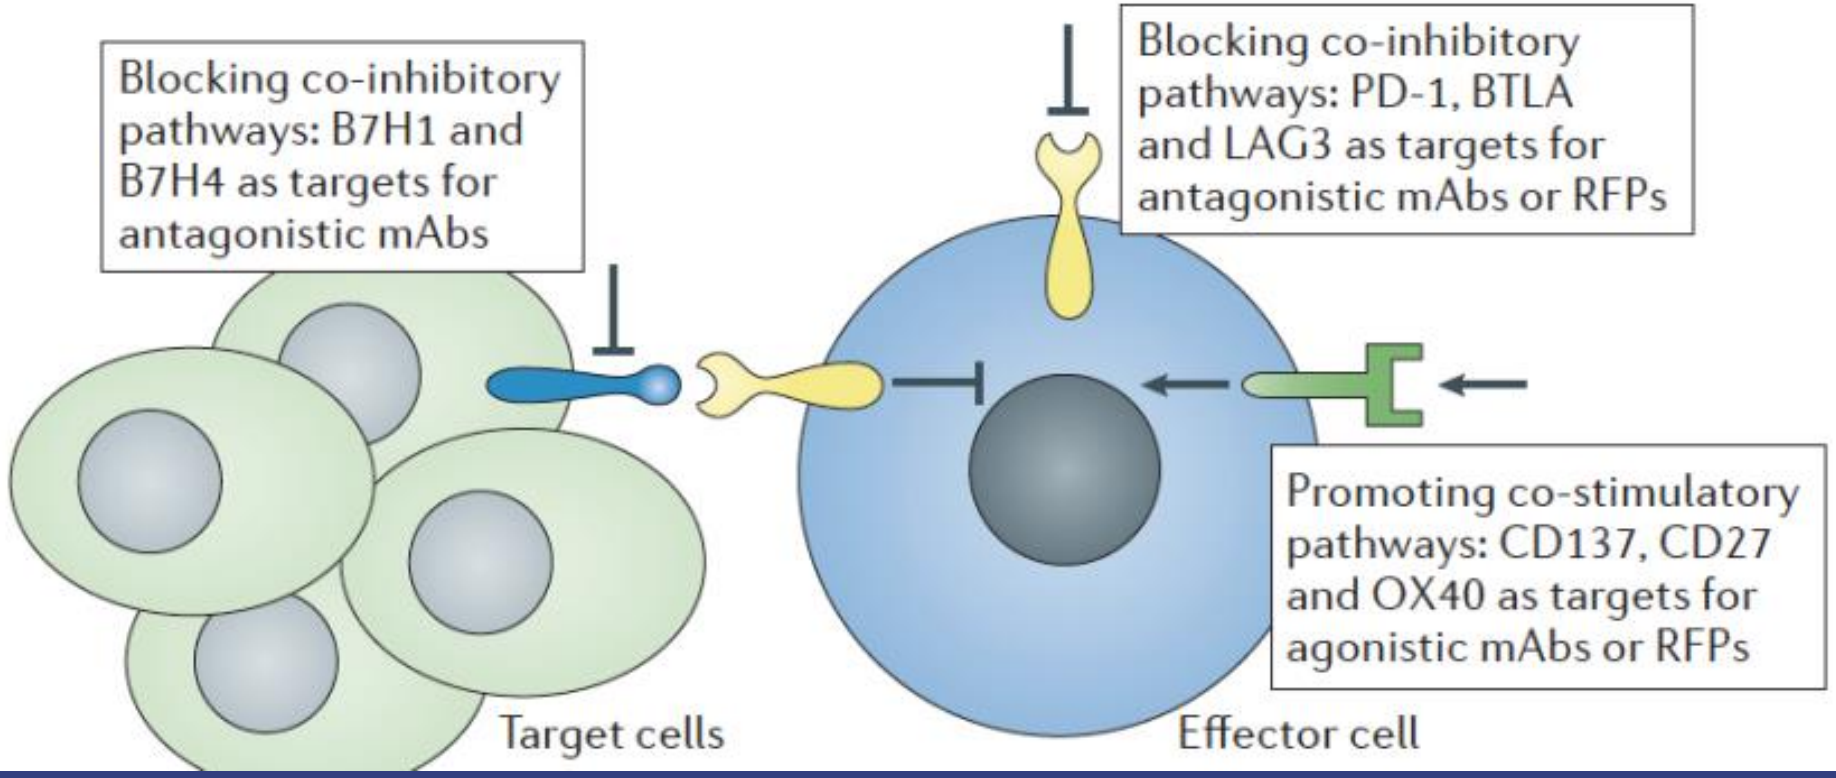
- Natural killer cells
- Dendritic cells
- Toll-like receptor
- T-lymphocytes
- Regulatory T-lymphocytes
- Chemokines
  - TGF Beta
  - IL-10

Immune Recognition



Yao S, et al. *Nat Rev Drug Discov.* 2013;12(2):130-146.

Antitumor Effects



EMORY WINSHIP CANCER INSTITUTE
A Cancer Center Designated by the National Cancer Institute

Yao S, et al. *Nat Rev Drug Discov.* 2013;12(2):130-146.

Basic Approaches

- Immunization
  - Utilize cancer vaccines to promote antitumor immunity
- Passive
  - Activated immune cells to enhance antitumor immunity
- Non-specific
  - Promote effector cells against tumor cells
  - Inhibit regulatory cells

Devita VT, et al. *Principles and Practice of Oncology*, 8th Edition. Lippincott, Williams, & Watkins. Philadelphia, PA.

CheckMate 063: Nivolumab in Sq NSCLC

- Stage IIIB/IV SQ NSCLC
- ≥2 prior systemic therapies
- ECOG 0–1

(N = 140 screened)

→

Nivolumab 3 mg/kg IV Q2W until PD or unacceptable toxicity

(N = 117)

→

Endpoints

Primary:
- Confirmed ORR* (IRC assessed)

Secondary:
- Confirmed ORR* (investigator assessed)

Exploratory:
- Safety and tolerability
- PFS/OS
- PD-L1 expression and efficacy

* Further characterized by DOR

- Planned to treat approximately 100 patients
  - Expected ORR of 10–50%, with 20% maximum width of exact 2-sided 95% confidence interval
- Assessments (RECIST v1.1) performed at week 8 and Q6W
  - Initial data lock March 2014 (including investigator-assessed endpoints)
  - Updated data lock July 2014 for IRC endpoints, OS and safety (minimum follow-up 11 months)

EMORY WINSHIP CANCER INSTITUTE
A Cancer Center Designated by the National Cancer Institute

Rizvi et al, Lancet Oncology, 2014

Phase II: Clinical Activity of Nivolumab

	IRC Assessed (per RECIST v1.1)[a]
ORR, % (n) [95% CI]	15 (17) [9, 22]
Disease control rate, % (n)	40 (47)
Median DOR, months (range)	NR (2+, 12+)
Ongoing responders, % (n)	76 (13)
Median time to response, months (range)	3 (2, 9)
PFS rate at 1-year, % (95% CI)	20 (13, 29)
Median PFS, months (95% CI)	2 (2, 3)

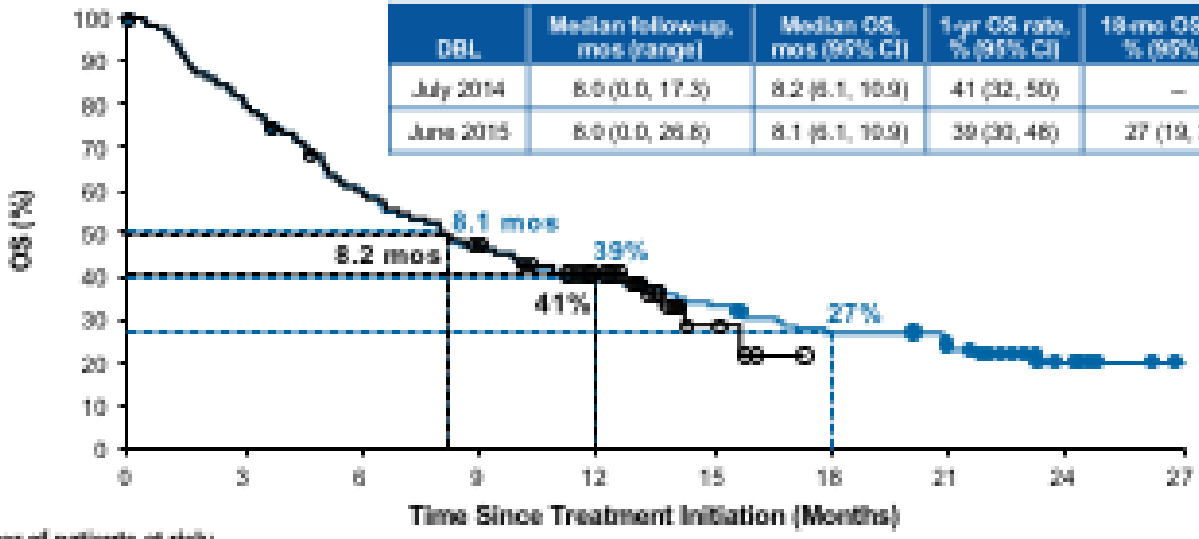
[a]July 2014 DBL
NR = not reached; DOR = duration of response; ORR = objective response rate; PFS = progression free survival

Ramalingam S et al CMSTO 2014

Efficacy

Overall Survival (All Treated Patients)

DBL	Median follow-up, mos (range)	Median OS, mos (95% CI)	1-yr OS rate, % (95% CI)	18-mo OS rate, % (95% CI)	Events, n/N
July 2014	8.0 (0.0, 17.5)	8.2 (6.1, 10.9)	41 (32, 50)	–	72/117
June 2015	8.0 (0.0, 26.8)	8.1 (6.1, 10.9)	39 (30, 48)	27 (19, 35)	90/117



Number of patients at risk:

July 2014 DBL	117	93	68	51	28	5	0	0	0	0
June 2015 DBL	117	93	69	54	45	35	30	24	6	0

Nivolumab vs. Docetaxel in Previously Treated Squamous NSCLC

N = 272

Key Eligibility Criteria
- Stage IIIB/IV squamous NSCLC
- Measurable disease
- ECOG PS ≤ 1
- Multimodal therapy allowed; disease progression after one platinum doublet-based chemo
- Available tumor tissue sample

RANDOMIZ

1:1

Nivolumab 3 mg/kg IV Q2W until PD or unacceptable toxicity (N=135)

Docetaxel 75 mg/m^2 IV Q3W until PD or unacceptable toxicity (N= 137)

Endpoints
- Primary: OS
- Secondary: ORR, PFS, PDL1-efficacy association, safety, QoL

One pre-planned interim analysis for OS
- At the time of database lock, 199 deaths reported[a,b]
- Boundary for OS superiority: *P*<0.03

[a]Data base lock was December 15, 2014
[b]86% deaths required for final analysis

Docetaxel	137	62	26	9	6	2	1	0	0

PFS per investigator.

EMORY WINSHIP CANCER INSTITUTE
A Cancer Center Designated by the National Cancer Institute

Nivolumab vs. Docetaxel in Advanced Non-Squamous NSCLC

N = 582

Key Eligibility Criteria
- Stage IIIB/IV NSCLC
- ECOG PS 0- 1
- Failed 1 prior platinum doublet
- Prior maintenance therapy allowed[a]
- Prior TKI therapy allowed for known ALK translocation or EGFR mutation
- Available tumor tissue sample

RANDOMIZ

1:1

Nivolumab 3 mg/kg IV Q2W until PD or discontinuation

Docetaxel 75 mg/m^2 IV Q3W until PD or discontinuation

Endpoints
- Primary: OS
- Secondary: ORR, PFS, PDL1 expression, disease-related symptom improvement rate

[a]Maintenance therapy included pemetrexed, bevacizumab, or erlotinib

- PD-L1 expression measured using DAKO/BMS automate IHC assay
  - Fully validated with analytical performance having met pre-determined acceptance criteria for precision, specificity, sensitivity and robustness

KEYNOTE-010 Study Design

Patients

- Advanced NSCLC
- Confirmed PD after ≥1 line of chemotherapy[a]
- No active brain metastases
- ECOG PS 0-1
- PD-L1 TPS ≥1%
- No serious autoimmune disease
- No ILD or pneumonitis requiring systemic steroids

R
1:1:1

- Pembrolizumab 2 mg/kg IV Q3W for 24 months
- Pembrolizumab 10 mg/kg IV Q3W for 24 months
- Docetaxel 75 mg/m^2 Q3W per local guidelines[c]

Stratification factors:

- ECOG PS (0 vs 1)
- Region (East Asia vs non-East Asia)
- PD-L1 status[b] (TPS ≥50% vs 1%-49%)

End points in the TPS ≥50% stratum and TPS ≥1% population

- Primary: PFS and OS
- Secondary: ORR, duration of response, safety

ClinicalTrials.gov, NCT01905657.

[a]Prior therapy must have included ≥2 cycles of platinum-doublet chemotherapy. An appropriate tyrosine kinase inhibitor was required for patients whose tumors had an *EGFR* sensitizing mutation or an *ALK* translocation.

[b]Added after 441 patients enrolled based on results from KEYNOTE-001 (Garon EB et al. *N Engl J Med*. 2015;372:2018-28).

[c]Patients received the maximum number of cycles permitted by the local regulatory authority.

Pembro Vs. Docetaxel in NSCLC: OS in All Patients

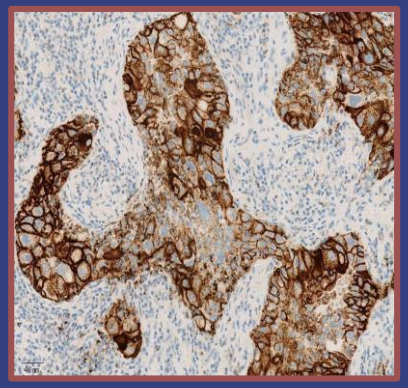
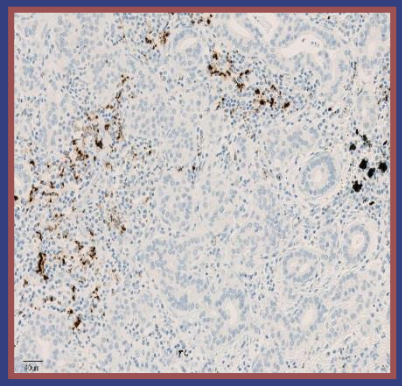
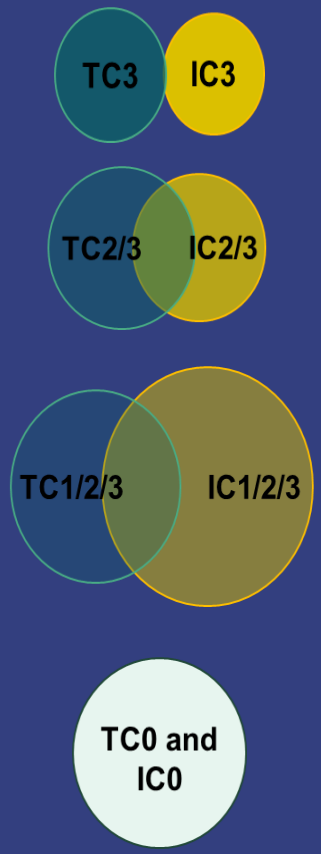
PD-L1 Expression on TC and IC is a Potential Predictive Biomarker for Atezolizumab in NSCLC



***Intrinsic* PD-L1 expression in tumor cells (TC)**



***Adaptive* PD-L1 expression in tumor-infiltrating immune cells (IC)**



PD-L1 expression levels and TC/IC overlap in POPLAR

- SP142 IHC assay is sensitive and specific for PD-L1 expression on both TC and IC.
- Distinct TC and IC sub-populations exist at each of four cutoff levels[a] (Gettinger SN et al. *J Clin Oncol.* 2015;33[suppl]: abstract 3015.)
- PD-L1 expression on TC and IC was independently predictive of response (Horn L et al. *J Clin Oncol.* 2015;33[suppl]: abstract 8029.)

EMORY WINSHIP CANCER INSTITUTE
A Cancer Center Designated by the National Cancer Institute

[a]TC scored as percentage of tumor cells and IC scored as percentage of tumor area. TC3 or IC3 = TC ≥ 50% or IC ≥ 10% PD-L1+; TC2/3 or IC2/3 = TC or IC ≥ 5% PD-L1+; TC1/2/3 or IC1/2/3 = TC or IC ≥ 1% PD-L1+; TC0 and IC0 = TC and IC < 1% PD-L1+, respectively.

Spira AI et al. *J Clin Oncol*. 2015;33(suppl): abstract 8010.

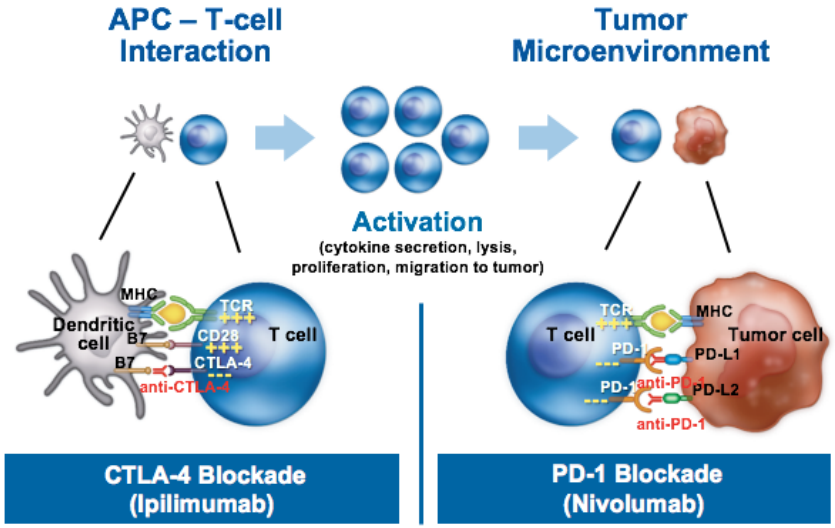
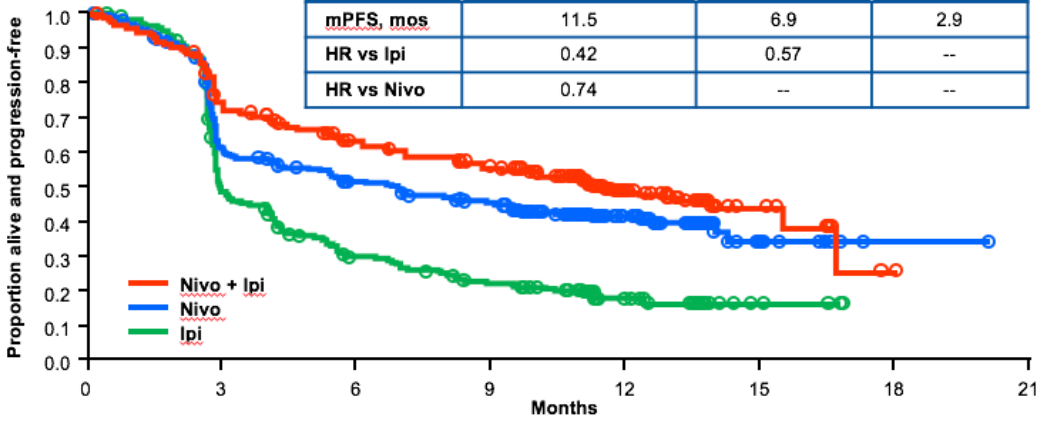
COMBINATION APPROACHES

Rationale for Combined CTLA-4 and PD-1 Blockade in NSCLC



PFS with nivo or nivo plus ipi vs ipi alone in previously untreated advanced MEL[12]

	Nivo + Ipi (N=314)	Nivo (N=316)	Ipi (N=315)
mPFS, mos	11.5	6.9	2.9
HR vs Ipi	0.42	0.57	--
HR vs Nivo	0.74	--	--



- Nivolumab and ipilimumab enhance T-cell antitumor activity through distinct but complementary mechanisms[5–8]
- Preclinical data suggest synergy with dual CTLA-4 and PD-1 blockade vs either agent alone[9]
  - Increased proliferation of effector CD8+ and CD4+ T cells and decreased intratumoral T-regulatory cells vs single pathway blockade
- Clinical experience with nivolumab plus ipilimumab demonstrate
  - Deep and durable responses in previously treated advanced MEL and SCLC[10,11]
  - 2-year OS of 79% in patients with previously treated advanced MEL[11]

Nivolumab + Ipilimumab in Melanoma

TOLERABILITY OF IMMUNOTHERAPY

Tolerability of Oncology Therapies

Chemotherapy

Target
Rapidly dividing tumour and normal cells

Adverse events
Diverse due to non-specific nature of therapy

I-O therapies

Target
Immune system

Adverse events
Unique events can occur as a result of immune-system activity

Targeted therapies

Target
Specific molecules involved in tumour growth and progression

Adverse events
Reflect targeted nature

Different spectrum of AEs with each modality

Some AEs with I-O may present like those with other therapies

BUT – AEs may have different etiologies
e.g. diarrhoea/colitis, fatigue, rash/pruritus, endocrinopathies

Require different management strategies

Nivolumab Vs. Docetaxel in NSCLC

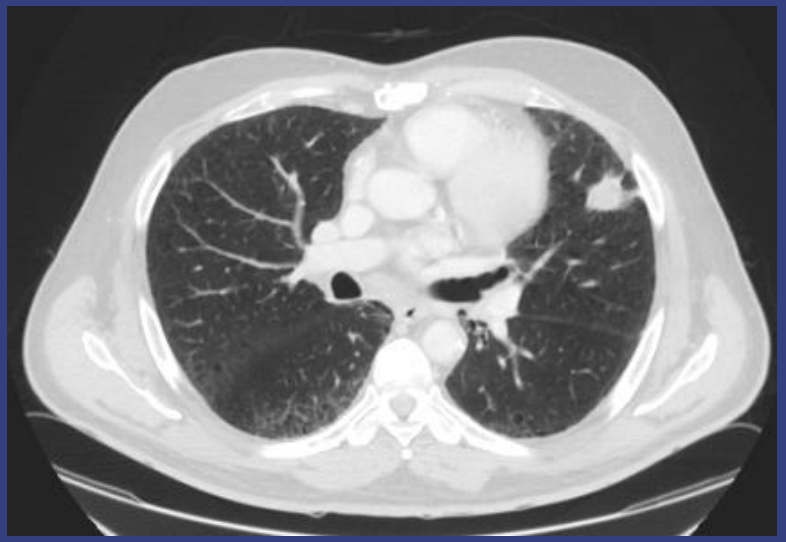
Case Study

Aug 6, 2013



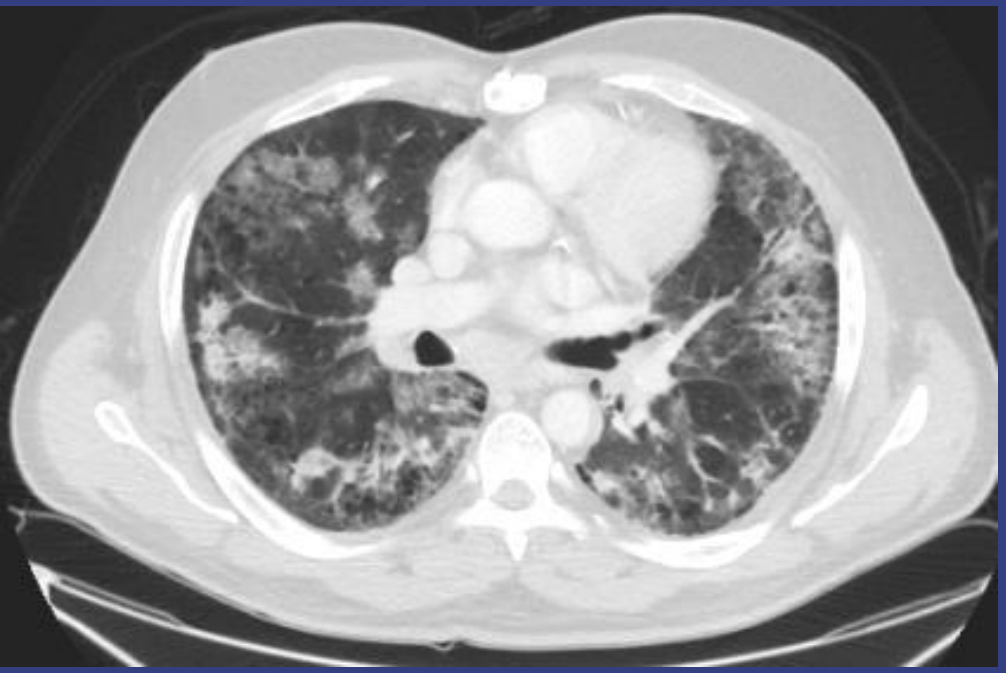
Feb 19, 2015

61/M
Newly Diagnosed stage IV
Squamous NSCLC
Bone metastasis
PS=1

Treatment:

1. **Palliative RT to rib lesion for pain control**
2. **Enrolled to a clinical trial with an immune check point inhibitor**

Case Study



- Patient presents with:
- Dyspnea
- Non-productive cough
- Fever
- X 2 weeks

Feb 17, 2014

Case Study

- The patient was given high dose steroids and PD-1 inhibitor therapy was withheld

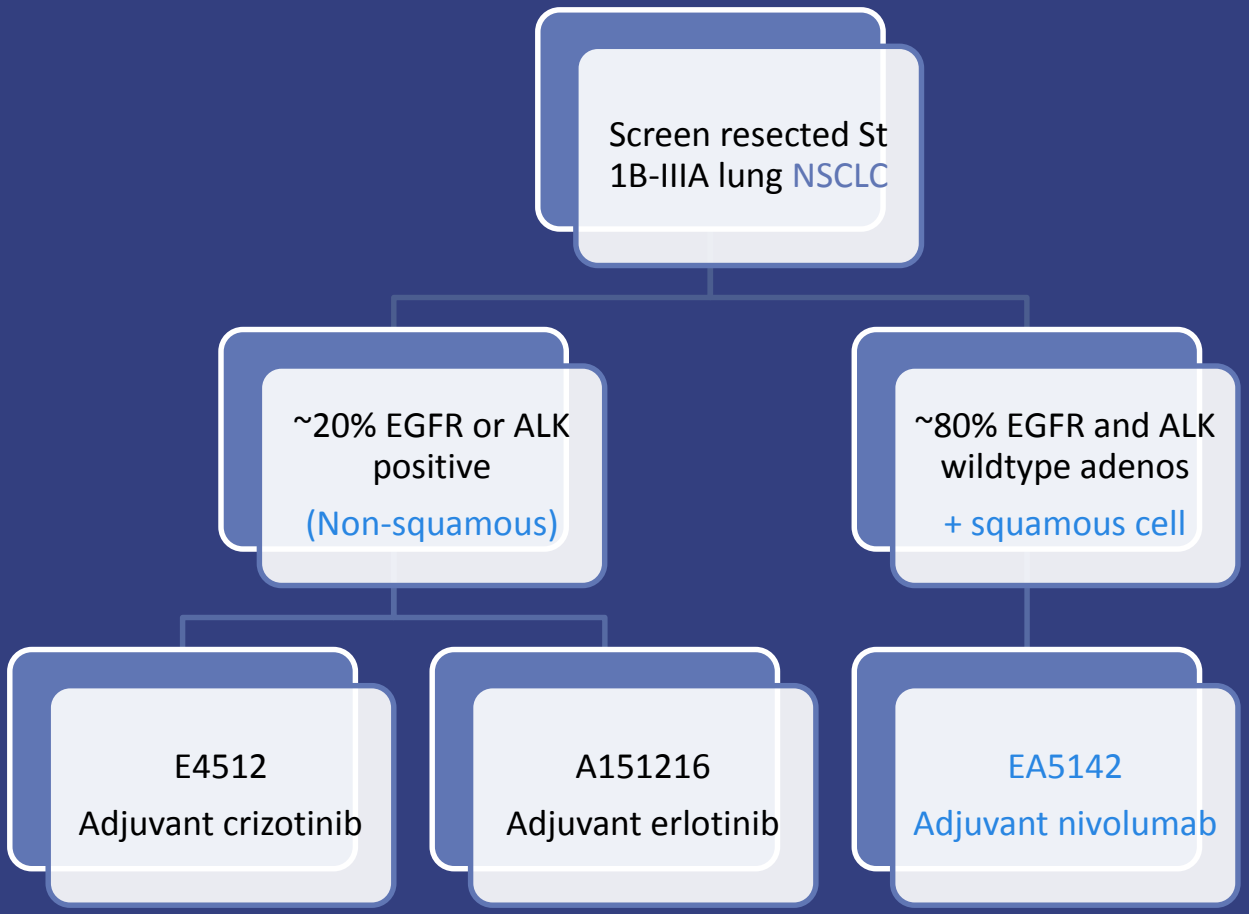
April 21, 2014

June 17, 2014

Ipilimumab: Immune-related AEs

- Mechanism-based adverse events (G 3/4)
  - Colitis (8-23%)
  - Hypophysitis (1-4%)
  - Hepatitis (3-7%)
  - Skin eruptions (0-4%)
  - Pneumonitis
- Cytokine release by activated T-cells are thought to be responsible

Immunotherapy in Curative Settings (NSCLC): ALCHEMIST



Important Clinical Issues

- Duration of therapy
- Fixed versus weight-based dosing
- Role of maintenance therapy
- Combination with chemotherapy
- Combination with targeted therapies

Conclusions

- Immune checkpoint inhibitors have improved outcomes for various solid organ malignancies
- Mutation burden appears to predict for benefit with immune checkpoint inhibitors
- Evaluation in curative settings is ongoing

The Drug Development Cycle
