

Meet the Network and Community Leadership
Network: Translational & Precision Medicine (TPM)
Community: International Transporter Consortium (ITC)

Community Past Chair:

**Kathleen Giacomini,
PhD**

University of California,
San Francisco
School of Pharmacy

Dr. Kathleen Giacomini is the co-chair of the International Transporter Consortium, ITC community. As a co-founder of the ITC, she is passionate about the study of translational and multi-sector research in a collaborative environment. By bringing scientists together from academia, industry and government, her goal is to advance our understanding of the role of transporters in the safe and effective use of medications. In her research, she has spent most of her career in elucidating the role of transporters in drug disposition and response. She has been particularly interested in discovering and characterizing polymorphisms in membrane transporters in multi-ethnic populations. She is thrilled about the opportunity to continue to work with the ITC community. She views this as an honor to be part of ASCPT, working with talented individuals who share the same enthusiasm she has for the research in transporters and understanding their role in drug disposition, response and safety.
